

RELEASED FOR PUBLICATION

Open-E offers Multiple Storage Server Manager Beta Download to SMB and SME Markets

New Open-E Multiple Storage Server Manager brings simplified central management to an unlimited number of Open-E DSS V7 servers

Atlanta, Georgia; Munich, Germany – May 29, 2013: [Open-E](#), a leading developer of innovative data storage software used for building and managing centralized storage servers, announced today that it is offering for a limited time, a download of its new [Multiple Storage Server Manager](#) (MSSM) Beta for simplified central management of all storage resources for SMB-to-enterprise, big data and cloud computing applications.

The download of Multiple Storage Server Manager Beta version v0.8 is available to all registered users and Open-E partners. The installation is fast and easy, and can be made on any system running MS Windows 7 (32-bit or 64-bit), with Intel Pentium 4.2GHz (or equivalent) and at least 1GB RAM.

MSSM dashboard can manage any number of Open-E DSS V7 servers (v.7.00 up to 7637 or newer) from any computer within the network, with a security guaranteed by a SSL connection. The OS independent, web-based GUI allows users to create a single view of all storage servers and resources on the network, while providing easy switching between servers. The seamless integration of MSSM saves significant time and operating expense by simplifying the process of managing tasks on multiple servers.

“The release of the Multiple Storage Server Manager Beta follows our recent announcements of Open-E DSS V7 with Hyper-V Cluster Support, iSCSI (SAN) Active-Active Failover Cluster Feature Pack and the software achieving VMware Ready™ status,” said Krzysztof Franek, CEO and president of Open-E. “The free download to our customer base demonstrates our ongoing commitment to providing affordable virtualized storage solutions that deliver superior performance and enterprise level reliability. The MSSM release continues our all-in-one universal storage systems strategy in helping businesses of all sizes to leverage off-the-shelf servers to simply build and operate the virtualized storage infrastructure they need to support their big data, cloud, and other SMB-to-enterprise applications.”

About Open-E

Open-E, Inc. is a pioneering leader and developer of IP-based storage management software. The Open-E DSS V7 and Open-E DSS V7 Lite line of products are aimed at the SMB and SME markets.

[Open-E DSS V7](#) is a robust, award-winning enterprise storage application which offers excellent compatibility with industry standards (vast variety of supported hardware), and is the easiest to use and manage. Additionally, it is one of the most stable solutions on the market and an undisputed price performance leader.

Open-E has over 27,000 world-wide installations in Fortune 500 organizations in over 100 countries for over a decade and has received numerous industry awards and recognition from PC Professional, Tom's Hardware, Storage Awards, PC Pro and more.

Thanks to its reputation, experience and business reliability, Open-E has become the technological partner of choice for industry-leading IT companies such as Citrix, Intel, LSI, VMware, and Adaptec.
